RS232-T2100

- Trojan Description
  - The Trojan trigger is a rare branch within the receiver part of the micro-UART core. The Trojan is activated at the predefined branch (line 113 in the u_rec module) and forces the rec_readyH output signal to be '0'.

- Trojan Taxonomy
  - Insertion phase: Design
  - Abstraction level: Register transfer level
  - Activation mechanism: Physical-condition-based
  - Effect: Denial of service
  - Physical characteristic: Functional
